

Use appropriate joins to solve following queries.

Note: To solve below queries, use “sales” database.

1. Write a query that lists each order number followed by the name of the customer who made the order.
2. Write a query that gives the names of both the salesperson and the customer for each order along with the order number.
3. Write a query that produces all customers serviced by salespeople with a commission above 12%. Display the customer's name, the salesperson's name, and the salesperson's rate of commission.
4. Write a query that calculates the commission earned by each salesperson for orders placed by customers with a rating above 100.
5. Write a query that produces all pairs of salespeople who are living in the same city. Exclude combinations of salespeople with themselves as well as duplicate rows with the order reversed.

Database Technologies - Assignment 7
