

CROSS JOIN

```
SELECT ename,dname
FROM emps CROSS JOIN depts;
```

```
SELECT ename,dname,deptno
FROM emps CROSS JOIN depts;
ERROR 1052 (23000): Column 'deptno' in field list is
ambiguous
```

```
SELECT ename,dname,emps.deptno
FROM emps CROSS JOIN depts;
```

```
SELECT e.ename,d.dname,e.deptno
FROM emps e CROSS JOIN depts d;
```

e and d are the alias given to the table names.

Giving alias with all the columns in the SELECT makes the query more readable.
