Data Structures and Algorithms - Assignment 8

1. Implement min heap (add and delete operations)

2. https://leetcode.com/problems/kth-largest-element-in-an-array/description (solve using heap)

    - You will need 0 based indexing for heap
        - root is at arr[0]
        - node : i
        - left child : 2i + 1
        - right child : 2i + 2
        - parent : (i-1)/2
        - Last Non leaf node : (n/2)-1 ==> first parent from right side

3. https://leetcode.com/problems/top-k-frequent-elements
