JS ->

```
class LinkedList<T>{

}

class Student{
        rollno
        name
        email
        marks
        mobile
}
```

```
LinkedList<Student> getStudents(){
        Student s1 = new Student();
        Student s2 = new Student();
        LinkedList<Student> l1 = new LinkedList<>()
        l1.add(s1);
        l1.add(s2);
        return l1;
}
```

1. Multiple pages
2. Share Data between multiple components
3. Navigation between pages
    - Nested Routing
4. lifecyle of component

SELECT
INSERT
UPDATE
DELETE

```
class Food{
        int *n1 = new int(10);
        ~Food(){
                delete n1;
        }
}

class Profile{
  if(food selected)
}       Food *f = new Food();
  else if(Profile selected)
        Profile p = new Profile();
```

useEffect()
- It is a hook used for managing the lifecycle of a component
- useEffect accepts 2 paramaters
  1. callback function
      - called when the component is loaded
  2. dependency array []
      - if the empty dependency array is passed then the given callback function gets called only once
      - if dependency arrray is not passed then the callback function is called for evey change in any state
      - if we pass the state to monitor inside the dependency array then the callback function gets called only for change in the given state to monitor
- the callback function can return another function from it which will be caled when the component unloads/ gets replaced by the another component

react-toastify

cart -> Food[] -> Every Food ->{fid,price,qty}

items 5

[{1,289,2} totalprice- 578

totalBill - 1285

{3,209,1} totalprice - 209

{4,249,2}] totalprice- 498

What will be added to the orders in db ?

- uid = token
- total_amount = 1000
- food[
    {fid:1, qty:2},
    {fid:2, qty:1},
    {fid:4, qty:2}
]

Create a backend on a user table that have below routes

1. post -> to add user
2. get -> to get all users
3. put -> to update user details
4. delete -> to remove the user

Create an frontend in react with below pages

1. Add user
2. Display alll users in a table
3. Update user
4. delete user
